

**FOR IMMEDIATE RELEASE**

## **TWO COOL IS TOO COOL...THE DACOR 30" INDUCTION RANGE**

Dacor brings "high-tech" and "cool-touch" together in a seamless ballet of form, function and safety.

**Los Angeles CA USA – 25 September 2013** – Dacor, the California based manufacturer of ultra-premium appliances, has launched the 30" Induction Range, which may be the safest kitchen appliance ever introduced to the American homeowner.

Combine a state-of-the-art induction cooking surface, a fast, efficient and the safe form of cooking, with the flush, handle free, Four-Part Convection™ Oven with CoolDoor™ Technology and you have the perfect embodiment of form and function.

The Dacor Induction Range uses electromagnetic energy to stimulate iron molecules to heat the cooking vessel itself. Unlike traditional cooking surfaces that heat up and stay hot long after the meal has been prepared, the glass-ceramic surface of the Induction top cools quickly as it is unaffected by the magnetic field.

The induction range comes standard with Dacor's CoolDoor Technology. A specially engineered detail that allows cool air to flow through the inside of the oven door, keeping it cool to the touch even when at maximum settings during cooking...the perfect safeguard for wandering little fingers.

To personalize your Range, you have your choice of one of two handle options, the professional Epicure® stainless steel handle, or the proprietary Flush (as shown) stainless steel handle which gives the range a clean contemporary look.

The Dacor 30" Induction Range is designed and manufactured in California along with the entire family of DACOR cooking products and are available through authorized Dacor retailers nationwide.

For additional information regarding the Dacor 30" Induction Range or for high resolution images, please contact Dacor Public Relations at 800.793.0093 x3161 or by email at [pr@dacor.com](mailto:pr@dacor.com)
